

Let's get to the bottom of colon cancer

Raising awareness for
colon cancer screenings.

Colon cancer is preventable, treatable, beatable.

Colon cancer screenings can prevent cancer from forming and save lives. In fact, colon cancer has a 90% survival rate when it's detected early. There are different screening options, depending on your risks:

Average risk: Colonoscopy or FIT test

If you are 45 or older, and you have no family history of colorectal cancer or polyps, talk to your primary care physician and ask them to either place an order for a colonoscopy screening, or order an at-home screening, called a FIT test. (If your FIT test is abnormal, you will need to schedule a colonoscopy.)

High risk: Colonoscopy recommended

Regardless of your age, if you have a family history of colorectal cancer or precancerous polyps or if you have a personal history of colon polyps, ulcerative colitis or crohn's, or a personal history of colorectal cancer, you should continue to have colonoscopy exams for screening or surveillance. Please connect with your primary care team or colonoscopy physician to help with a colonoscopy.

Active Gastrointestinal Symptoms or Not Sure: Talk to your care team

If you have questions, or concerns about symptoms such as rectal bleeding, low blood counts (anemia), change in bowel movements, persistent abdominal pain, or unintentional weight loss, please talk to your primary care or gastrointestinal care team about your next steps in care

Talk to your primary
care physician to better
understand your risks
and get the screening
that is right for you.

March 2024
Colon Cancer Awareness Month

Date:	Time:	Location:
3/1/24	10:00 AM - 2:00 PM	McKay-Dee Hospital 4401 Harrison Blvd. Ogden UT 84403
